

FTM additional instructions

The FTM is only capable of transferring .zip and .pdf files. This is to minimize the amount of bandwidth used transferring large files.

To send multiple zip or pdf files, zip them into a single zip file.

If you do not have zip compression software installed, you can download the following software packages:

Free:

7zip (<http://www.7-zip.org/>)

Izarc (<http://www.izarc.org/>)

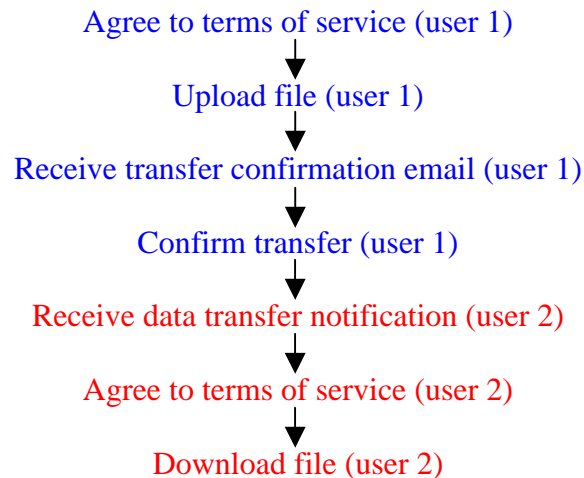

Licensed:

winzip (<http://www.winzip.com/index.htm>)

winrar (<http://www.win-rar.com/>)

Process overview:

The following illustrates how the transfer process works:

Important note: if user 1 does not confirm the transfer, user 2 will never be notified and the data will not be sent, and the data will eventually expire off the server.
